STATICTEC

FOR BASIC ESD MATERIALS AND MORE

ESD PRODUCT CATALOGUE

The StaticTec product line is a compact assortment of products, selected for daily use by professionals. ESD safety used to be mysterious and solutions expensive, but we try to offer you a line of basic ESD materials and more. Today's electronics are getting smaller and more sophisticated and components get more sensitive for static loads discharging at levels that humans cannot even sense anymore. Therefore ESD protective actions must be taken in order to prevent damage during development, assembly and repair of modern electronics. In this catalogue you will find what you need on a daily basis. We do our best to offer you a good quality product at a very competitive price level. At present we offer a limited assortment, but we will add products to our line if desired in future.

Electrostatic discharge (ESD) is the sudden flow of electricity between two electrically charged objects caused by contact, an electrical short, or dielectric breakdown. A build-up of static electricity can be caused by tribo-charging or by electrostatic induction. The ESD occurs when differently-charged objects are brought close together or when the dielectric between them breaks down, often creating a visible spark.

ESD can cause a range of harmful effects of importance in industry, including gas, fuel vapor and coal dust explosions, as well as failure of solid state electronics components such as integrated circuits. These can suffer permanent damage when subjected to high voltages. Electronics manufacturers therefore establish electrostatic protective areas (EPA) free of static, using measures to prevent charging, such as avoiding highly charging materials and measures to remove static such as grounding human workers, providing antistatic devices, and controlling humidity.

One of the causes of ESD events is static electricity. Static electricity is often generated through tribo-charging, the separation of electric charges that occurs when two materials are brought into contact and then separated. Examples of tribo-charging include walking on a rug, rubbing a plastic comb against dry hair, rubbing a balloon against a sweater, ascending from a fabric car seat, or removing some types of plastic packaging. In all these cases, the friction between two materials results in tribo-charging, thus creating a difference of electrical potential that can lead to an ESD event.

Many electronic components, especially microchips, can be damaged by ESD. Sensitive components need to be protected during and after manufacture, during shipping and device assembly, and in the finished device. Grounding is especially important for effective ESD control. It should be clearly defined, and regularly evaluated. Standardization of regulations is very important if we all want to work at an equal standard. Therefore IEC 61340-5 version 1 and 2 are leading specifications one can follow as a guideline in avoiding damage by electrostatic discharge.

ESD TEST AND CONTROL

Portable Surface Resistance Meter

This surface resistivity tester is designed to measure the resistivity and resistance to ground of mats, workbenches, floors and other components of an ESD controlled area.

Without the grounding connection, it measures the surface resistivity. With the grounding cord connected, it measures the resistance to the ground.

Item # ST250010

Portable Wrist-Strap Tester

Portable instrument for checking wrist strap and cord.
Unit has 4mm banana socket and 10mm stud connections.
Portable kit including tester and 9V battery.

Item # ST250030

All Testers Are Supplied With A Fresh Calibration Certificate!

Personal Test Station

For a daily check-up of your wrist bands, heel grounders, shoes and lab coats.
Place this test station near the entrance of your workplace.
Complete set, consisting of wall plate with tester and floor plate,
incl 9V battery.

Item # ST250050

Of Course We Offer Yearly Calibration Services

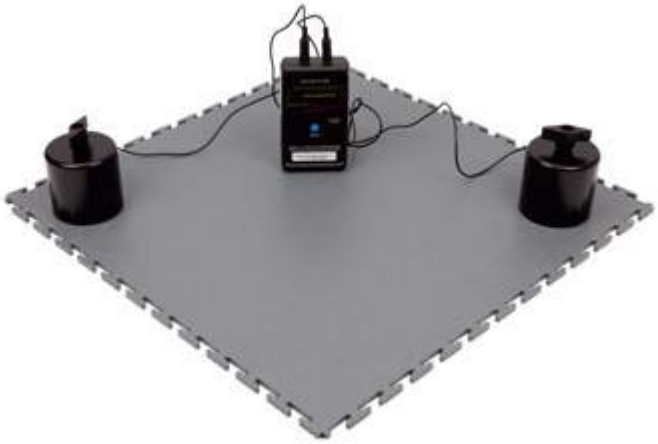

Surface Resistance Meter Kit

This surface resistivity tester is designed to measure the resistivity and resistance to ground of mats, workbenches, floors and other components of an ESD controlled area.
Without the grounding connection, it measures the surface resistivity.
With the grounding cord connected, it measures the resistance to the ground.
Portable kit including tester, two probes 2,5 Kg, 9V battery, manual and carrying case.

Item # ST250020

ESD Flooring Must Be Tested Every 3 Months!

Professional Megohmmeter Kit

Measures surface resistance, temperature and humidity, all according to IEC61430 and ANSI
Complete with tester, 2.5Kg weights and grounding cords
Including English manual and calibration certificate
Packed in convenient carrying case
Supplied incl. 9V battery

ESD PACKAGING

SHIELDING BAGS OPEN-TOP

Semi-transparent, heat sealable, the metallised shielding bags offer excellent protection for ESD sensitive devices.
A buried layer of metallic film sandwiched between an inner layer of polyethylene and an outer layer of polyester to provide protection against all static damage without exposing metal surfaces.
ESD - recycling logo and itemnumber are printed on front
Weld seam is provided with Production date.

Meets: IEC 61340-5-1, ANSI 20:20 and JEDEC STD-033

ESD LABELS

ESD packaging labels are an important safety precaution for protecting ESD from damage.

- *Use ESD packaging labels on all packaging that will come into contact with ESDs.*
- *Make sure the labels are clearly visible and easy to read.*
- *Do not remove the labels from the packaging until the ESDs are in their final destination.*
- *Store ESD packaging labels in a clean, dry environment.*
- *Self adhesive paper label*
- *Roll of 1.000*

QUIET-AIR

A new name that stands for silent compressed air.
You work safely and without noise, due to sound levels of only 53 to 59 dBA! A complete line of affordable compresors for light industry and hobby.
Air-cooled motors for clean and safe air.
All models have a coated tank, which prevents rusting from the inside. 4 Models with a high capacity and mobile due to the use of the wheels and handles.

1 Model especially for medical professionals, such as dentists and chiropractors, low maintenance due to the built-in air-dryer, also as an extra guarantee for clean, dry air. And all this in an extra sound-absorbing cabin.

In addition, we offer a very complete range of air hoses and connectors and optionally an extra micro air filter for extra protection of your valuable equipment.

Need advice on your application?
Our skilled dealers are happy to support you. Quiet-Air offers you a competitively priced complete solution!
